

Primax Electronics Ltd.

Energy Policy

- **Team building, Moving Forward Together**

Aligned with the company's mission and the context of the organization, its activities, products, and services achieve tangible outcomes in energy conservation and carbon reduction through the active participation of all employees in energy management.

- **Goal-Driven, Enhancing Efficiency**

Establish and review the framework for objectives and energy targets, continuously optimize equipment, operational processes, and energy efficiency, and ensure the availability of information and necessary resources to achieve the objectives and energy targets.

- **Grounded in Compliance, Sustainable Development**

To comply with energy-related laws and regulations, and to develop a blueprint and roadmap for sustainable development in alignment with policy trends.

- **Continuous Improvement, Pursuing Excellence**

Continuously improve the energy management system through regular review and adjustment, and promote ongoing enhancement of energy performance.

- **Green Procurement, Optimizing Design**

Support the procurement of products and services that affect energy performance, as well as the design activities for improving energy performance; give priority to energy-saving and environmentally friendly products and solutions to implement green energy management.
